Community volunteers hosted 17 undergrad and graduate students from the Georgia Institute of Technology in Sandersville on Saturday, February 26th. Students, their professor Dr. Leslie Sharpe, and community volunteers toured six downtown buildings, the Paris-Veal Home and Tennille Baptist Church (Choate buildings). These architecture, building construction and city planning students will provide two alternate uses for each of the buildings with drawings and floor plans. These plans will be used as ideas for future development of Sandersville’s downtown buildings.

Sandersville-Tennille-Washington County GICH committee members attended the GICH conference in Savannah to develop strategies to complete the final year of GICH involvement.

Historical society representatives began planning marketing materials for the Washington County Historical Society that will be designed by a UGA graphic design intern.
